

Practice Assignment: Building a Simple Task Management Application

Objective:

To develop a basic task management application using .NET Web API for the backend and Angular for the frontend.

Requirements:

1. Backend (Using .NET Web API):

- Implement RESTful APIs for CRUD operations on tasks.
- Use MSSQL or MSSQL Express as the database server.
- Implement basic authentication for API endpoints.
- Ensure proper error handling and validation of incoming requests.

2. Frontend (Using Angular):

- Create a user interface to display tasks and allow users to add, edit, delete, and mark tasks as completed.
- Implement authentication using a simple username/password mechanism (no need for JWT tokens).
- User should be able to see the task list and the task add/update view side by side.
- Add sorting and filtering capabilities for tasks.

3. Additional Features (Optional):

- Include basic styling to improve the visual appearance of the application.
- Display relevant messages to users.

4. Deliverables:

- Upload source code for the backend, frontend applications and DB backup or script to GitHub and share the repo URL.
